3768

MAIL DATE

DELIVERY MODE

03/17/2009

PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/593,072	OSHIKI ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	JOEL F. BRUTUS	3768	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 15 September 2006.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-24 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 15 September 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Specification***

1. Applicant is reminded of the proper language and format for an abstract of the disclosure. The submitted abstract has two paragraphs.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3768

2. Claims 1-9, 12-13, and 18, 20-22 and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Ito et al (US Pat: 6,132,373).

Regarding claims 1-2, 5-6, Ito et al teaches an apparatus for measuring an intima-media thickness of a blood vessel [see abstract] that anticipates the claimed invention. Ito et al further teaches data analyzing device for receiving image data and calculating the intima media thickness of the blood vessel according to the image data [see abstract]; the digital data includes a plurality of luminance values each corresponding to respective one of a plurality of pixels of the image [see abstract]; The data analyzing device includes a setting device for setting a base position between a center of the blood vessel and a position in a vicinity of an inner intima wall of the blood vessel on the image [see abstract]; a calculation device for detecting maximum value and a minimum value from among the luminance values corresponding to a predetermined number of the pixels; calculating the intima media thickness based on the maximum and minimum values [see abstract]. Ito et al teaches in the data analyzing device, a certain part of the image of the blood vessel including parts of the intima, media is extracted as a target part which is a line of pixels extending along the radius of the blood vessel [see column 2 lines 52-57]. The setting device calculates a moving average of the luminance values in the target part and sets a base position between the center of the blood vessel and the position in the vicinity of the inner intima wall of the blood vessel within the target part of the image [see column 2 lines 52-55]. A thickness calculation device that includes one to five detection devices for detecting maximum and minimum values of luminance [see column 3 lines 39-54];

Art Unit: 3768

Regarding claim 20, Ito et al teaches calculation device for calculating a difference between a value representing the position of an inner intimal wall and a value representing the position of an inner adventitial wall, thereby obtaining the intima media thickness [see column 4 lines 1-3]. Adventitia also known as lunica externa and it is shown in fig 2. Measuring location of the border between the intima and media (the outer intimal wall of the inner medial wall), and the location of the border between the media and adventitia (outer media wall or the inner adventitial wall) [see column 9 lines 1-5].

Regarding claims 3-4, 7-9, 12-13, 18, Ito et al teaches the largest peak value is observed at a point indicating a position on the adventitia (lunica externa) and a second peak indicates a position on the intima [see fig 6C and column 9 lines 45-63]; two points Xa and Xb are regarded as points indicating the locations of inner adventitial wall and inner intimal wall [see column 9 lines 55-60]. An algorithm to calculate inner intima and adventitia walls [see column 9 lines 64-67]; In fig 8-9, axis of abscissa indicates positions of pixels arranged along the x axis from a start position of measurement, the axis indicates luminance values observed in an image [see column 10 lines 1-5]. Image data composed of m pixels ranging from the first pixel to the m-th pixel is extracted [see column 10 lines 12-15]; plotting points of luminance values observed in the extracted image data, data composed of 50 pixels arranged along the X axis is extracted [see column 10 lines 20-23]; in other words a threshold value range of 50 pixels is extracted. An average value of luminance values is calculated in units of 20 pixels from the start position (first pixel and also consider as the reference point) [see fig 6B, column 10 lines

Art Unit: 3768

24-27]; A difference of the latest average value is calculated and determines whether the difference exceeds a predetermined value or fall below [see column 10 lines 28-33]; comparing peak value luminance to determine the locations of intima and externa. The luminance with largest peak value indicates the location of the externa [see column 10 lines 40-60]. The position or a position at which a decrease in the luminance value becomes equal to or smaller than DI [see FIG 9b] indicates the location of intimal wall [see column 11 lines 11-15].

Moving average value of luminance is calculated in units of 20 pixels from the start position of measurements; determine whether difference exceeds predetermined luminance value; the pixel having the largest luminance is in the region of adventia [see column 10 lines 45-60] and see figs 9A-6]. A change in tissular density occurring on the border between the tunica media adventitial is not large; distance resolution of 0.1 mm [see column 11 lines 25-35]. IMT values exceeding 1.1 mm may be colored in red and thus distinguished as a domain and an examiner collects IMT value with an evaluation table to be printed out; a line indicating an IMT of 1.1 mm may be drawn as a reference and a domain of IMT values exceeding 1.1 mm may be colored [see column 15 lines 1-10].

Regarding claims 21-22 and 24, all the limitations are taught as set forth above by Ito et al. The above teaching anticipates the method as claimed. Ito et al teaches at least five detection devices and luminance detection device of Ito et al is used as brightness distribution acquisition; since luminance is another way of saying brightness.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 10-11, and 15-17, 19 and 23, are rejected under 35 U.S.C. 103(a) as being unpatentable over Ito et al (US Pat: 6,132,373) in view of Ito et al (US Pat: 5,353,220).

Regarding claims 10-11, 15-17, and 23, all other limitations are taught as set forth above. Ito et al further teaches an ultrasonic probe to emit waves to the common carotid; Ultrasonic waves are reflected more greatly from the region of the intima [see column 8 lines 10-16]. The region reflecting ultrasonic more greatly appears as a high-luminance area in an ultrasonic image on the display screen of the ultrasonic apparatus [see column 8 lines 13-15]; a change in luminance is measured in a direction in which a blood vessel is traversed, whereby intima media thickness can be measured [see column 8 lines 17-20]. Observing a far wall and near wall as a region of IMT to be measured [see column 8 lines 55-60].

The above teaching is silent to a binarization process and obtaining tunica intima based on color distribution of Doppler signals; reconstructing images and three dimensional image data.

However, Ito et al teaches a color three dimensional image data using Doppler image data; a flow in a certain blood vessel is adopted as the object [see column 2 lines

Art Unit: 3768

55-60], data of blue color indicating flow in particular area and flow in red color in another area [see column 2 lines 62-67]; positions of blood vessels are extracted after binarization by threshold processing for each data in respective colors, and the extracted profile points are arranged so as to reconstruct three dimensional images [see column 3 lines 1-5]; displaying a 3D color Doppler image by respective color reconstructed [see column 3 lines 6-8]. Display data of red and data of blue showing a state of a flow of blood flow with binarization process [see column 3 lines 15-24].

Therefore, it would have been obvious to one with ordinary skill in the art would have been motivated to combine these references by using the teachings of Ito et al to obtain the tunica intima; for the purpose of measuring IMT more accurately and easily than the conventional method.

Regarding claim 19, all other limitations are taught as set forth above.

The above teaching is silent to marking the extracted region on the display unit,

However, Ito et al teaches using different colors to mark a blood parameter in a display screen [see column 1 lines 35-50].

Therefore, it would have been obvious to one with ordinary skill in the art would have been motivated to combine these references by marking the extracted region; in order to increase visualization.

5. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ito et al (US Pat: 6,132,373) in view of Sano (US Pat: 5,615,680).

Regarding claim 14, all other limitations are taught as set forth above.

Art Unit: 3768

The above teaching is silent to a signal processing having a filter.

However, Sano et al teaches a phase detector includes a mixer, a low pass filter [see column 6 lines 25-30, lines 50-55]; A signal processor [see column 6 lines 13]; And signal processing section [see fig 1].

Therefore, it would have been obvious to one with ordinary skill in the art would have been motivated to combine these references; for the purpose of eliminating artifacts or noise in the image; thereby enhancing signal to noise ratio.

### ***Conclusion***

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOEL F. BRUTUS whose telephone number is (571)270-3847. The examiner can normally be reached on Mon-Fri 7:30 AM to 5:00 PM (Off alternative Fri).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on (571)272-0823. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
